

# Plan Your Preventative Care Reminders

Controlling healthcare costs starts with identifying and treating high-cost diseases early.

Use this worksheet to create a plan for reminding members to schedule their preventative health care services.

Which diagnoses are driving the highest claim costs?	Which healthcare procedures, screenings, or services could help members catch these diagnoses early? (List the procedure codes below.)	Which gender(s) does this apply to?	What member age range does this apply to?	After the member goes for this preventative care, how soon would you like to remind them to schedule their next appointment? (3 months, 6 months, etc.)
